

The purpose of this meeting is to lay out options for moving forward with the TMDL and consider what is most viable. Objectives of the meeting are as follows:

- Review historical perspective from Region 10 on analytical methods (attached)
- Draft timeline of communication with the tribe, (joint?) EPA management briefing [see attached May 16 document pages 4-6, "time frame and process"; it would be helpful to come out of this call with an updated draft time frame and process]
- Discuss key points for briefing management

From Dave: Ecology made a case that their TMDL method is the most appropriate, that they considered and rejected other methods, and that the analysis EPA provided is more arbitrary. **Ex. 5 - Deliberative**

Ex. 5 - Deliberative

R – The next steps from our June 3 meeting with Ecology were that EPA Region 10 and HQ will have another meeting to “lay out options” and consider what is most viable.

E – Are we on the same page with Region 10?
If no, go to management before the state/tribe/others.

S – We’d like to come out of this call with a draft time frame for communication with the tribe, state, stakeholders, everyone.
